

Is a Square a Rectangle?

Age 7 to 11 ★

How many rectangles can you find in this shape?

How many of the rectangles are differently shaped?

Can you find any that are 'similar' - that is the same shape but a different size?

Struggling to get started? Think about the following questions:

- Can you say what makes a rectangle a rectangle?
- Did you know that a square is a special sort of rectangle?
- Can you think what the difference is?
- How will you keep a record of all of the different rectangles that you find?
- Can you build this shape out of cards or objects? Does this make it easier to see the rectangles?
- What shapes can you see when you combine two or more of the shapes?
